Evidencer Suite for **Law Enforcement**

Evidencer suite for Law an Enforcement is an advanced investigation analysis and data recording system that captures and archives live proceedings right from crime scenes to the primary investigation interviews at police stations. It comes packed with two Evidencer products:

The Evidencer Mob, a mobile application that provides a single tap provision to the public. They can use their mobile device to record crimes and straight away report to the concerned officials at any time from anywhere.

The Evidencer Pro 2 channel, which records the proceedings of a police station and keeps a record of the reported complaints.

Evidencer **MOB**

Instead of ignoring a crime, you can now report it immediately, discretely, and securely to the officials with the tap of a button. Evidencer Mob is a real time mobile application for instant crime reporting. It has one channel audio-video recording provision. It provides a platform on smartphone for the common people to receive fast, discrete and intelligent safety assistance. Evidencer Mob is integrated with IBM MobileFirst security features. Features of Evidencer Mob include:

- One channel audio/ video recording.
- App can be deployed in iOS / Android / Windows platform.
- Real time and instant crime data collection.
- User anonymity offered as per user requirement.
- Instant transfer of the recorded data to crime department.
- Can be easily integrated with the existing court management solutions.
- App delivered in an Evidencer Mobility platform.
- Application accessible via internet or GSM.

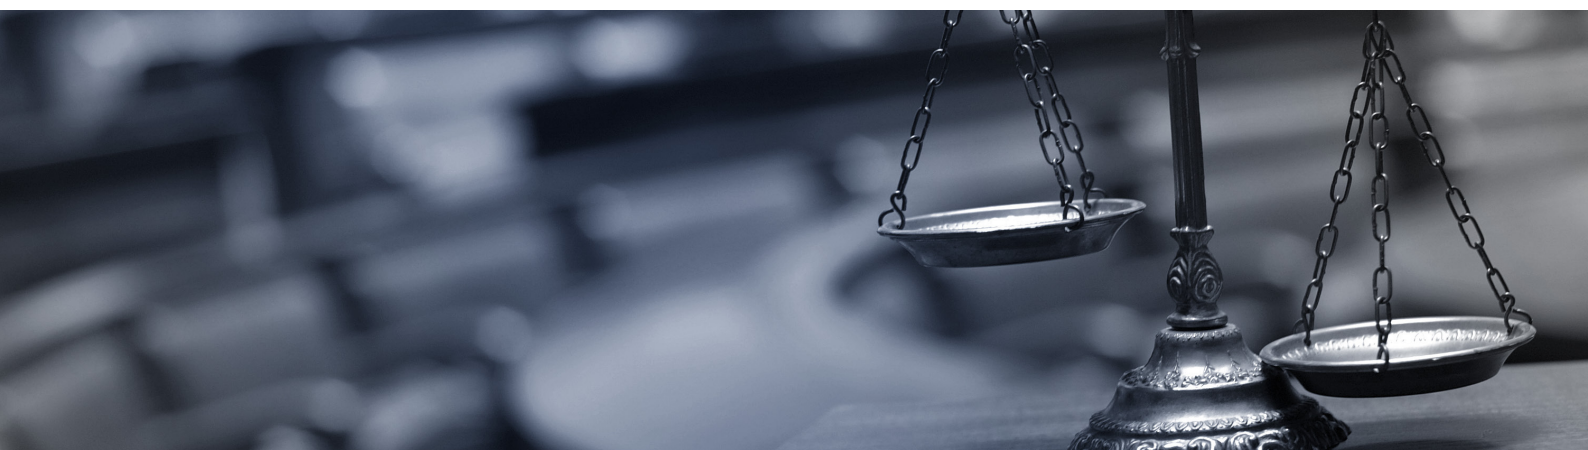

Evidencer **PRO 2 CHANNEL**

Evidencer Pro 2 Channel is an integrated software product that captures data like text, and high quality audio and video of live events at a police station on an enterprise mobility platform and lets you playback whenever needed. It is a dedicated digital recording and content management solution for the society to earn their justice. Evidencer not only captures data, but also analyses it by leveraging latest technologies like Big Data, and Enterprise Video Analytics. It can digitally capture everything including the 24x7 activities along with first investigation report registered at the police stations, and play them back when required. Two embedded channels are provided for collecting audio and video. The locally stored audio and video will be sent to the central server for future reference.

Feaures Of Evidence **Pro 2 Channel include:**

Rich set of powerful tools delivering greater insights, intelligence and transforming the decision making process.

- Supports two-channel audio and video recordings from the crime department.
- Cloud-enabled product suite that allows on-demand usage.
- Permits development, testing, deployment, hosting, and maintenance of applications in a single integrated development environment.
- Deploy and manage applications and services without the constraint of time, location or device type.

Integration With intelligent Operation Centre

The IBM Intelligent Operations Centre solution integrates and uses data from Evidencer Mob and Evidencer Pro 2 Channel, and makes sense of it on a single interface. It simplifies crime reporting process and initiates the immediate action to be taken by the concerned. IBM Intelligent Operations Centre brings reports to the concerned and alerts for action to be taken when needed. It also helps to synchronise and analyse efforts among decision makers, thereby helping them react immediately. In short, it provides a unified view for the crime department in keeping justice and providing instant safety measures and decision making. When Evidencer for Law Enforcement and IBM Intelligent Operations Centre combine, the capabilities include:

- Incident reporting and tracking.
- Real-time collaboration.
- Situational awareness and reporting.
- The ability to open standard connection points to existing and future systems. An easy-to-use interface designed with multiple types of users in mind.
Helps city officials monitor and manage city services more efficiently by providing them insight into daily city operations through, centralised management and data intelligence.
- Helps city agencies prepare for problems before they arise and to coordinate and manage the issues when they occur.
Enables officials to communicate instantly, and discuss and synchronise rescue efforts so they can send the correct people and equipment to the correct places at the correct times.
- Facilitates cross agency decision making, convergence of domains, coordination of events, communication, and collaboration, and hence improve the quality of services to the citizens and reduce expenses.

A Complete Investigative and Courtroom Solution Innovation for Justice and legal proceedings.
