Welcom To Evidencer Suite For
Judiciary

Evidencer Suite for Judiciary is an intelligent digital data capture solution for courts and police stations to record, curate and analyse events. It is an enterprise-ready solution that supports mobility, and works in integration with the cloud platform. We offer two solutions:

The **Evidencer Pro 4 Channel**, which was created to capture evidence anywhere, any time and make court proceedings simpler, less manual, digitised, reliable, and trouble -free.

The **Evidencer Enterprise**, which delivers a high quality, efficient, and effective approach towards the overall decision making and justice process. A major differentiating feature of this product is the live streaming of data and information using the product's Central Broadcasting Server.

We have leveraged latest technologies like Big Data, Video Analytics, Enterprise Mobility and more to create an agile, robust and effective application.

Why **Evidencer**

Record Data

Capturing and recording data in a safe, fast and secure set up leads to faster case resolution and digitised curation.

Digitised

Digital recording with synced audio and video with texts makes it searching for events during the case trial easier.

Instant access to records

Searching and retrieving data is made easy and reliable with date and time stamps attached to every log entry.

Reports

Create reports that help analyse statistics and reach case conclusion faster, with Intelligent Enterprise Analytics.

Digital note-taking

Empower your clerical staff with the flexibility and ease of taking notes during trials digitally.

On Demand videos

Now access any videos at any time with Video-On-Demand.

Facial Recognition

Perform advanced analytics like facial recognition to resolve case trials faster and with accuracy.

Central Broadcasting Server

Broadcast live courtroom sessions to anywhere in the world, with central broadcasting server.

Intelligent Operation Centre

Gain useful insights and enterprise oversight capabilities, with Intelligent Operation Centre.
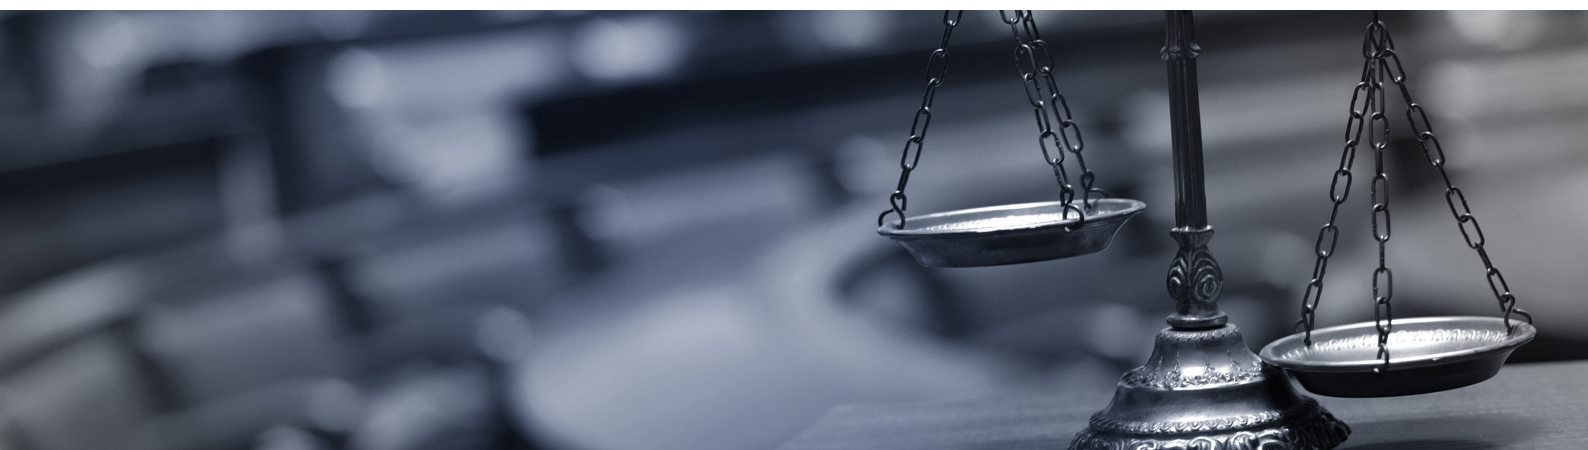

Intelligent Video Analytics

Perform advanced analytics like behavioural pattern and motion analysis to make accurate decisions.

Evidencer **PRO 4 CHANNEL**

- Witness a seamless experience with intelligent data capture, playback recordings, digital note taking and cloud storage.

- For small court rooms.

- Four independent audio and video channels.

- Highlighting features include audio and video data capture, digital note-taking, synchronised data and text, date and time stamp recorded with log notes, cloud integration, enterprise mobility, secure storage and much more.

Evidencer **Enterprise**

- Evidencer Enterprise edition is a much advanced and sophisticated version of the Evidencer Pro.

- Increased security, stability and reliability.

- Central Broadcasting Server lets you broadcast live happenings in courtrooms or during police interrogations to a user anywhere in the world.

- Big Data for analysing large volumes of case data.

- Report generation for effective analytics thrrough IBM Cognos BI.

- Edit recorded proceedings, transfer the local archives to central servers and much more.

Integration With intelligent
Operation Centre

The crime related data recorded and collected from Evidencer Pro 4 channel and Evidencer Enterprise are directed to the IBM Intelligent Operation Centre where it is restructured and analysed for decision making and to provide justice. It enables the judiciary to monitor its services and operations to facilitate insightful decision-making. This approach helps provide effective event response management and coordination. IBM Intelligent Operations Centre processes data feeds and event information from individual departments to help improve the operational efficiency of the judiciary. It provides an executive dashboard to depict the overall status of a reported crime.

When Evidencer for Judiciary and IBM Intelligent Operations Centre combine, the capabilities are limitless:

- Easy-to-use interface that helps applications to facilitate data exchange and improve efficiency.

- Efficiently manage it through the entire court system making case information accessible across the organization.

- Helps enforce and apply rules, timing exceptions, tolerance levels and other processes, facilitating the effective management and fair handling of court cases.

- Enables courts and law enforcement to gather complete, relevant information from many sources to build a case.

- Process automation streamlines the management of court cases and highlights time-sensitive cases.

- Reduce the number of cases that are thrown out of court as a result of expired time limits.

- Assists the courts and law enforcement agencies close cases faster, with better out- comes.
