Evidencer Suite for **SMARTER CITIES**

Globalisation and urbanisation are advancing at a fast rate with the assistance of Internet of Things (IoT). Only places with advanced infrastructure, security, and safety along with an enhanced socio-eco ders in bulk. In order to be forefront in this race, major cities and towns around the globe are moving towards the Smarter City concept, a practical approach towards this issue, assisted by the rapidly growing technologies. Reports from BCC suggests t hat the Smart Cities technologies will grow from US $212.3 billion in 2013 to US $668.5 billion in 2019.

Smarter City– **what is it?**

A Smarter City is an urbanised, sustainable, and connected region that utilises information and communication technologies (ICT) from multiple sectors to enhance the performance and quality of services, improve citizen engagement and regional competence, and reduce cost and resource consumption. A Smarter City is defined by eight key elements according to Frost & Sullivan: Smart Governance, Smart Building, Smart Healthcare, Smart Mobility, Smart Infrastructure, Smart Technology, Smart Energy and Smart Citizens.

Smarter governance **& smarter citizen**

The increasing rate of crimes and other emergency situations have prompted city authorities and citizens look for an enhanced solution that could bring immediate and effective response to those in need. Any kind of insecurities against a normal social activity can be brought to the attention of the concerned department through an Integrated Security System, which is the ultimate pool of data from various emergency management services. This solution offers a clean process of planning, communication and mobile solution for security, in a smarter way.

The solution – **Evidencer Suite with IOC**

The increasing rate of crimes and other emergency situations have prompted city authorities and citizens look for an enhanced solution that could bring immediate and effective response to those in need. Any kind of insecurities against a normal social activity can be brought to the attention of the concerned department through an Integrated Security System, which is the ultimate pool of data from various emergency management services. This solution offers a clean process of planning, communication and mobile solution for security, in a smarter way.
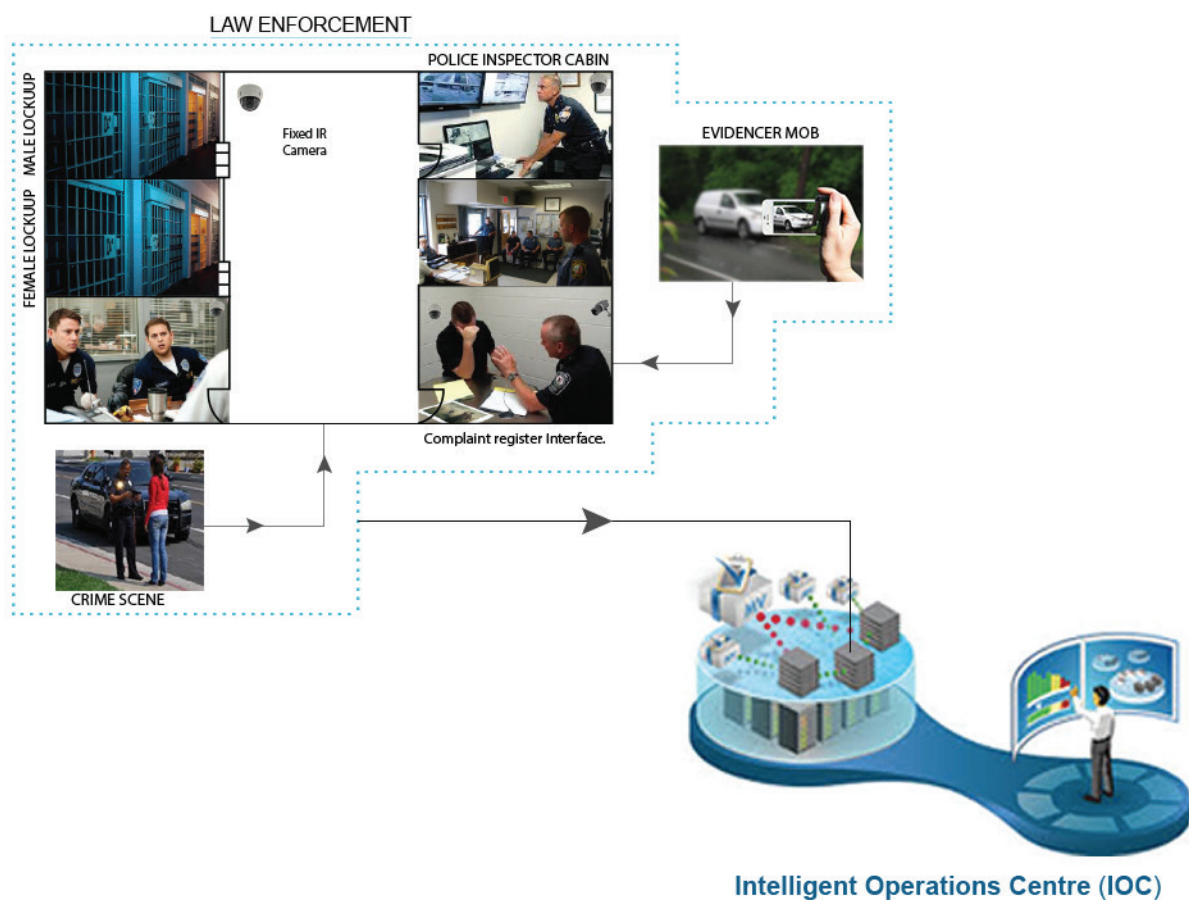

Evidencer suite for **Law Enforcement**

is an advanced investigation analysis and data recording system that captures and archives live proceedings right from crime scenes to the primary investigation interviews at police stations. It comes packed with two Evidencer products:

Evidencer Mob : A mobile application that provides a single tap provision to the public. It can be used to record the crime and automatically report it to the concerned officials at anytime from anywhere straight away.

The Evidencer Pro 2 channel : Easily capture the proceedings of a police station and securely store the filed complaints. This system has two embedded independent channels for audio and video recording. The locally stored data is uploaded to the central server for later use.

Evidencer suite for **Judiciary**

is an intelligent digital data capture solution for mobile courts, and small and big court rooms to record, curate, and analyse events. These make court procedures simpler, less error-prone and digitised. Evidencer suite for judiciary consists of two products that offer advanced functionalities along with the basic Evidencer features.

Evidencer Evidencer Pro 4 Channel : A digital media capturing solution for small courts and legal offices. The four independent channels record audio and video of the proceedings and store them to the central server for future references. It is equipped with features such as two-way communication between remote locations, data capture with time stamps and log notes, enterprise mobility, cloud integration, and security among others.

Evidencer Enterprise : This product is much more advanced and sophisticated, and is designed for large enterprises. It comes with eight independent audio and video channels, has the ability to broadcast live data to remote users, and even perform intelligent analytics on recorded data and video, including Big Data, motion sensing, face recognition, and behavioural analysis.

We have leveraged latest technologies like Big Data, Video Analytics, Enterprise Mobility and more to create an agile, robust and effective application.
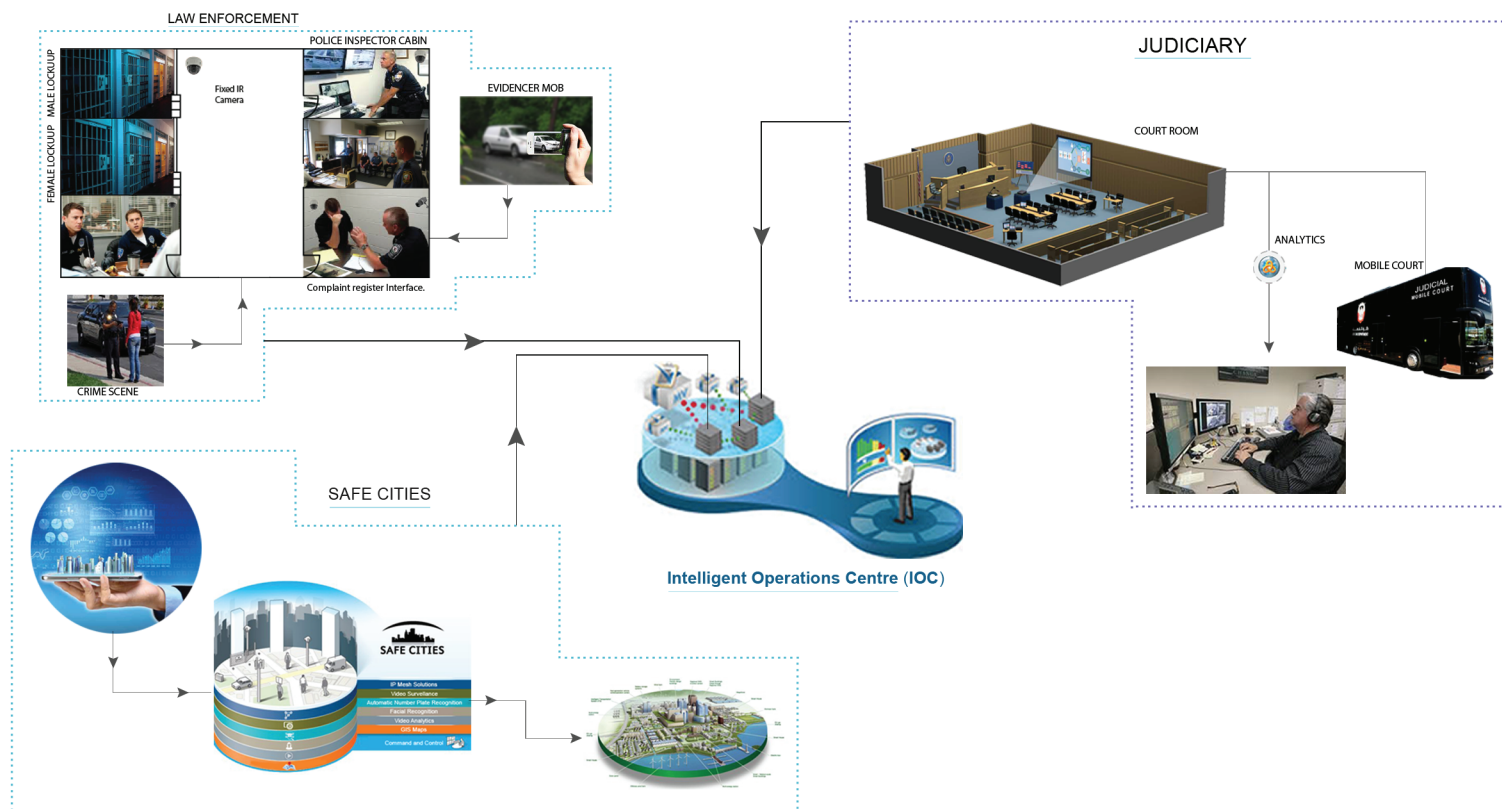

How Evidencer creates **Smarter City**

IBM IOC acts as a common platform for the pool of data collected from various sources:

- Data from every police departments where crimes are reported using Evidencer Suite for Law Enforcement.
- All files related to case proceedings recorded using Evidencer Suite for Judiciary from various courtrooms along with related evidence.
- Data from video surveillance systems, automatic number plate recognition, facial recognition, applications with geographic information system (GIS) maps, and command and control unit of various public safety agencies and departments.

All these information are integrated together and processed and analysed in the IOC to provide the best possible solution that is relevant for the situation where multiple safety agencies are collaborated. This brings down the delay in response to a public safety situation –the outcome of which would be a **Smarter City.**

A Complete Investigative and Courtroom Solution
Innovation for Justice and legal proceedings.
